

4.6: 2, 3, 7, 8, 11, 12

4.6.2) Which of the following sets of vectors are bases for \mathbb{R}^3 ?

(a) $\left\{ \begin{bmatrix} 1 \\ 2 \\ 0 \end{bmatrix}, \begin{bmatrix} 0 \\ 1 \\ -1 \end{bmatrix} \right\}$ (b) $\left\{ \begin{bmatrix} 1 \\ 1 \\ -1 \end{bmatrix}, \begin{bmatrix} 2 \\ 3 \\ 4 \end{bmatrix}, \begin{bmatrix} 4 \\ 1 \\ -1 \end{bmatrix}, \begin{bmatrix} 0 \\ 1 \\ -1 \end{bmatrix} \right\}$

(c) $\left\{ \begin{bmatrix} 3 \\ 2 \\ 2 \end{bmatrix}, \begin{bmatrix} -1 \\ 3 \\ 1 \end{bmatrix}, \begin{bmatrix} 0 \\ 1 \\ 0 \end{bmatrix} \right\}$ (d) $\left\{ \begin{bmatrix} 1 \\ 0 \\ 0 \end{bmatrix}, \begin{bmatrix} 0 \\ 2 \\ -1 \end{bmatrix}, \begin{bmatrix} 3 \\ 1 \\ 7 \end{bmatrix}, \begin{bmatrix} 0 \\ 0 \\ 0 \end{bmatrix} \right\}$

Need to show $[\vec{v}_1, \vec{v}_2, \dots, \begin{bmatrix} a \\ b \\ c \end{bmatrix}]$ is L.I. and $\text{Span } \mathbb{R}^3$.

(a) No. $\left[\begin{array}{ccc|c} 1 & 0 & 0 & a \\ 2 & 1 & 0 & b \\ 0 & -1 & 0 & c \end{array} \right] \xrightarrow{-2r_1 + r_2} \left[\begin{array}{ccc|c} 1 & 0 & 0 & a \\ 0 & 1 & 0 & b-2a \\ 0 & -1 & 0 & c \end{array} \right] \xrightarrow{r_2 + r_3} \left[\begin{array}{ccc|c} 1 & 0 & 0 & a \\ 0 & 1 & 0 & b-2a \\ 0 & 0 & 0 & b-2a+c \end{array} \right]$ need $b-2a+c=0$
b.t. are L.I.

(b) $\left[\begin{array}{cccc|c} 1 & 2 & 4 & 0 & a \\ 1 & 3 & 1 & 1 & b \\ -1 & 4 & -1 & -1 & c \end{array} \right] \xrightarrow{\substack{-r_1 + r_2 \\ r_1 + r_3}} \left[\begin{array}{cccc|c} 1 & 2 & 4 & 0 & a \\ 0 & 1 & -3 & 1 & b-a \\ 0 & 6 & 3 & -1 & a+c \end{array} \right] \xrightarrow{-2r_2 + r_1} \left[\begin{array}{cccc|c} 1 & 0 & 10 & -2 & 3a-2b \\ 0 & 1 & -3 & 1 & b-a \\ 0 & 6 & 3 & -1 & a+c \end{array} \right] \xrightarrow{-6r_2 + r_3} \left[\begin{array}{cccc|c} 1 & 0 & 10 & -2 & 3a-2b \\ 0 & 1 & -3 & 1 & b-a \\ 0 & 0 & 21 & -7 & 7a-6b+c \end{array} \right] \xrightarrow{1/21 r_3} \left[\begin{array}{cccc|c} 1 & 0 & 10 & -2 & 3a-2b \\ 0 & 1 & -3 & 1 & b-a \\ 0 & 0 & 1 & -1/3 & \frac{1}{21}(7a-6b+c) \end{array} \right]$ which is consistent, so $\text{Span } \mathbb{R}^3$ (well, first three needed).
but not L.I. so No.

(c) $\left[\begin{array}{ccc|c} 3 & -1 & 0 & a \\ 2 & 2 & 1 & b \\ 2 & 1 & 0 & c \end{array} \right] \xrightarrow{-r_3 + r_1} \left[\begin{array}{ccc|c} 1 & -2 & 0 & a-c \\ 2 & 2 & 1 & b \\ 2 & 1 & 0 & c \end{array} \right] \xrightarrow{-r_3 + r_2} \left[\begin{array}{ccc|c} 1 & -2 & 0 & a-c \\ 0 & 1 & 1 & b-c \\ 2 & 1 & 0 & c \end{array} \right] \xrightarrow{-2r_2 + r_3} \left[\begin{array}{ccc|c} 1 & -2 & 0 & a-c \\ 0 & 1 & 1 & b-c \\ 0 & 5 & 0 & -2a+3c \end{array} \right] \xrightarrow{-5r_2 + r_3} \left[\begin{array}{ccc|c} 1 & -2 & 0 & a-c \\ 0 & 1 & 1 & b-c \\ 0 & 0 & -5 & -2a-5b+c \end{array} \right]$ which is consistent and shows L.I., thus forms a basis for \mathbb{R}^3 .

(d) $\left[\begin{array}{cccc|c} 1 & 0 & 3 & 0 & a \\ 0 & 2 & 4 & 1 & b \\ 0 & -1 & 1 & 0 & c \end{array} \right] \xrightarrow{r_3 + r_2} \left[\begin{array}{cccc|c} 1 & 0 & 3 & 0 & a \\ 0 & 2 & 4 & 1 & b+c \\ 0 & -1 & 1 & 0 & c \end{array} \right] \xrightarrow{r_2 + r_3} \left[\begin{array}{cccc|c} 1 & 0 & 3 & 0 & a \\ 0 & 1 & 5 & 1 & b+c \\ 0 & 0 & 6 & 0 & b+2c \end{array} \right]$ which is consistent but not L.I., so not a basis for \mathbb{R}^3 .

4.6.3 Which of the following sets of vectors are bases for R_4 ?

(a) $\{[1001], [0100], [1111], [0111]\}$ (b) $\{[1-102], [3-121], [1001]\}$

(c) $\{[-2464], [0120], [-1232], [-3256], [-2-104]\}$

(d) $\{[0011], [-1112], [1100], [2121]\}$

(a)
$$\left[\begin{array}{cccc|c} 1 & 0 & 1 & 0 & a \\ 0 & 1 & 1 & 1 & b \\ 0 & 0 & 1 & 1 & c \\ 1 & 0 & 1 & 1 & d \end{array} \right] \xrightarrow{-r_1+r_4} \left[\begin{array}{cccc|c} 1 & 0 & 1 & 0 & a \\ 0 & 1 & 1 & 1 & b \\ 0 & 0 & 1 & 1 & c \\ 0 & 0 & 0 & 1 & -a+d \end{array} \right] \xrightarrow{-r_4+r_2, -r_4+r_3} \left[\begin{array}{cccc|c} 1 & 0 & 1 & 0 & a \\ 0 & 1 & 1 & 0 & a+b-d \\ 0 & 0 & 1 & 0 & a+c-d \\ 0 & 0 & 0 & 1 & -a+d \end{array} \right] \xrightarrow{-r_3+r_1, -r_3+r_2} \left[\begin{array}{cccc|c} 1 & 0 & 0 & 0 & d-c \\ 0 & 1 & 0 & 0 & b-c \\ 0 & 0 & 1 & 0 & a+c-d \\ 0 & 0 & 0 & 1 & -a+d \end{array} \right]$$

So is L.I. and spans R_4 . Hence a basis.

(b)
$$\left[\begin{array}{ccc|c} 1 & 3 & 1 & a \\ -1 & -1 & 0 & b \\ 0 & 2 & 0 & c \\ 2 & 1 & 1 & d \end{array} \right] \xrightarrow{\substack{r_1+r_2 \\ \frac{1}{2}r_3 \\ -2r_1+r_4}} \left[\begin{array}{ccc|c} 1 & 3 & 1 & a \\ 0 & 2 & 1 & a+b \\ 0 & 1 & 0 & c/2 \\ 0 & -5 & -1 & d-2a \end{array} \right] \xrightarrow{-2r_3+r_2, 5r_3+r_4} \left[\begin{array}{ccc|c} 1 & 3 & 1 & a \\ 0 & 0 & 1 & a+b-\frac{2}{3}c \\ 0 & 1 & 0 & c/2 \\ 0 & 0 & 1 & d+\frac{5}{3}c-2a \end{array} \right] \xrightarrow{-r_2+r_4} \left[\begin{array}{ccc|c} 1 & 3 & 1 & a \\ 0 & 0 & 1 & a+b-\frac{2}{3}c \\ 0 & 1 & 0 & c/2 \\ 0 & 0 & 1 & d+\frac{5}{3}c-2a \end{array} \right]$$

which is consistent if $-3a-b+\frac{7}{3}c+d=0$,
So does not span R_4 .

(c)
$$\left[\begin{array}{ccccc|c} -2 & 0 & -1 & -3 & -2 & a \\ 4 & 1 & 2 & 2 & -1 & b \\ 6 & 2 & 3 & 5 & 0 & c \\ 4 & 0 & 2 & 6 & 4 & d \end{array} \right] \xrightarrow{\substack{2r_1+r_2 \\ 3r_1+r_3 \\ 2r_1+r_4}} \left[\begin{array}{ccccc|c} -2 & 0 & -1 & -3 & -2 & a \\ 0 & 1 & 0 & -4 & -5 & 2a+b \\ 0 & 2 & 0 & -4 & -6 & 2a+c \\ 0 & 0 & 0 & 0 & 0 & 2a+d \end{array} \right]$$

which is consistent if $2a+d=0$
So ~~is~~ is not a basis or spans R_4 .

(d)
$$\left[\begin{array}{cccc|c} 0 & -1 & 1 & 2 & a \\ 0 & 1 & 1 & 1 & b \\ 1 & 1 & 0 & 2 & c \\ 1 & 2 & 0 & 1 & d \end{array} \right] \xrightarrow{r_3+r_1} \left[\begin{array}{cccc|c} 1 & 0 & 1 & 4 & a+c \\ 0 & 1 & 1 & 1 & b \\ 1 & 1 & 0 & 2 & c \\ 1 & 2 & 0 & 1 & d \end{array} \right] \xrightarrow{\substack{-r_1+r_3 \\ -r_1+r_4}} \left[\begin{array}{cccc|c} 1 & 0 & 1 & 4 & a+c \\ 0 & 1 & 1 & 1 & b \\ 0 & 1 & -1 & -2 & -a+c \\ 0 & 2 & -1 & -3 & -a+d \end{array} \right] \xrightarrow{\substack{-r_2+r_3 \\ -2r_2+r_4}} \left[\begin{array}{cccc|c} 1 & 0 & 1 & 4 & a+c \\ 0 & 1 & 1 & 1 & b \\ 0 & 0 & -2 & -3 & -a-b+c \\ 0 & 0 & -3 & -5 & -a-b+d \end{array} \right] \xrightarrow{-r_4+r_3} \left[\begin{array}{cccc|c} 1 & 0 & 1 & 4 & a+c \\ 0 & 1 & 1 & 1 & b \\ 0 & 0 & -2 & -3 & -a-b+c \\ 0 & 0 & -1 & -2 & -a-b+d \end{array} \right]$$

which is consistent and L.I.
Thus spans R_4 .

Determine which of the given subsets form a basis for \mathbb{R}^3 . Express $\begin{bmatrix} 3 \\ 1 \\ 3 \end{bmatrix}$ in terms of the subset that does form a basis.

4.6.7 (a) $\left\{ \begin{bmatrix} 1 \\ 1 \end{bmatrix}, \begin{bmatrix} 1 \\ 2 \\ 3 \end{bmatrix}, \begin{bmatrix} 0 \\ 1 \\ 0 \end{bmatrix} \right\}$ (b) $\left\{ \begin{bmatrix} 1 \\ 2 \\ 3 \end{bmatrix}, \begin{bmatrix} 3 \\ 1 \\ 3 \end{bmatrix}, \begin{bmatrix} 0 \\ 0 \\ 0 \end{bmatrix} \right\}$

$$(a) \begin{bmatrix} 1 & 1 & 0 & | & a \\ 1 & 2 & 1 & | & b \\ 1 & 3 & 0 & | & c \end{bmatrix} \xrightarrow{-r_1, r_2} \begin{bmatrix} 1 & 1 & 0 & | & a \\ 0 & 1 & 1 & | & -a+b \\ 0 & 2 & 0 & | & -a+c \end{bmatrix} \xrightarrow{-r_2, r_3} \begin{bmatrix} 1 & 0 & -1 & | & 2a-b \\ 0 & 1 & 1 & | & -a+b \\ 0 & 0 & -2 & | & a-2b+c \end{bmatrix} \xrightarrow{-\frac{1}{2}r_3} \begin{bmatrix} 1 & 0 & -1 & | & 2a-b \\ 0 & 1 & 1 & | & -a+b \\ 0 & 0 & 1 & | & -\frac{1}{2}(a-2b+c) \end{bmatrix}$$

$$\xrightarrow{r_3+r_1, -r_3+r_2} \begin{bmatrix} 1 & 0 & 0 & | & \frac{3}{2}a - \frac{1}{2}c \\ 0 & 1 & 0 & | & -\frac{1}{2}a + \frac{1}{2}c \\ 0 & 0 & 1 & | & -\frac{1}{2}a + b - \frac{1}{2}c \end{bmatrix}$$

So this gives a basis and $\begin{bmatrix} 2 \\ 1 \\ 3 \end{bmatrix} = \frac{3}{2} \begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix} + \frac{1}{2} \begin{bmatrix} 1 \\ 2 \\ 3 \end{bmatrix} - \frac{3}{2} \begin{bmatrix} 0 \\ 1 \\ 0 \end{bmatrix}$

(b) Note basis for $\text{ker} T$ contains $\begin{bmatrix} 0 \\ 0 \\ 0 \end{bmatrix}$, so dropping it

$$\begin{bmatrix} 1 & 2 & | & a \\ 2 & 1 & | & b \\ 3 & 3 & | & c \end{bmatrix} \xrightarrow{-2r_1, r_2} \begin{bmatrix} 1 & 2 & | & a \\ 0 & -3 & | & -2a+b \\ 0 & -3 & | & -3a+c \end{bmatrix} \xrightarrow{-r_2+r_3} \begin{bmatrix} 1 & 2 & | & a \\ 0 & -3 & | & -2a+b \\ 0 & 0 & | & -a-b+c \end{bmatrix} \xrightarrow{-\frac{1}{3}r_2} \begin{bmatrix} 1 & 2 & | & a \\ 0 & 1 & | & \frac{2}{3}a - \frac{1}{3}b \\ 0 & 0 & | & -a-b+c \end{bmatrix}$$

$$\xrightarrow{-2r_2+r_1} \begin{bmatrix} 1 & 0 & | & -\frac{1}{3}a + \frac{2}{3}b \\ 0 & 1 & | & \frac{2}{3}a - \frac{1}{3}b \\ 0 & 0 & | & -a-b+c \end{bmatrix} \text{ So } 45(-2) - (1) + (3) = 0, \begin{bmatrix} 2 \\ 1 \\ 3 \end{bmatrix} = 0 \begin{bmatrix} 1 \\ 2 \\ 3 \end{bmatrix} + 1 \begin{bmatrix} 2 \\ 1 \\ 3 \end{bmatrix}$$

4.6.8 (a) $\left\{ \begin{bmatrix} 2 \\ 1 \\ 3 \end{bmatrix}, \begin{bmatrix} 1 \\ 2 \\ 1 \end{bmatrix}, \begin{bmatrix} 1 \\ 4 \\ 4 \end{bmatrix}, \begin{bmatrix} 1 \\ 5 \\ 1 \end{bmatrix} \right\}$ (b) $\left\{ \begin{bmatrix} 1 \\ 1 \\ 2 \end{bmatrix}, \begin{bmatrix} 2 \\ 2 \\ 0 \end{bmatrix}, \begin{bmatrix} 3 \\ 4 \\ -1 \end{bmatrix} \right\}$

(a) $\begin{bmatrix} 2 & 1 & 1 & 1 & | & a \\ 1 & 2 & 1 & 5 & | & b \\ 3 & 1 & 4 & 1 & | & c \end{bmatrix}$

$-r_2 + r_1$ $\begin{bmatrix} 1 & -1 & 0 & -4 & | & a-b \\ 1 & 2 & 1 & 5 & | & b \\ 3 & 1 & 4 & 1 & | & c \end{bmatrix}$

$-r_1 + r_2$ $\begin{bmatrix} 1 & -1 & 0 & -4 & | & a-b \\ 0 & 3 & 1 & 9 & | & -a+2b \\ 3 & 1 & 4 & 1 & | & c \end{bmatrix}$

$-3r_1 + r_3$ $\begin{bmatrix} 1 & -1 & 0 & -4 & | & a-b \\ 0 & 3 & 1 & 9 & | & -a+2b \\ 0 & 4 & 4 & 13 & | & -3a+3b+c \end{bmatrix}$

$r_2 + r_1$ $\begin{bmatrix} 1 & 0 & 3 & 5 & | & a-b \\ 0 & 3 & 1 & 9 & | & -a+2b \\ 0 & 4 & 4 & 13 & | & -3a+3b+c \end{bmatrix}$

$-3r_2 + r_3$ $\begin{bmatrix} 1 & 0 & 3 & 5 & | & a-b \\ 0 & 3 & 1 & 9 & | & -a+2b \\ 0 & 0 & -8 & -35 & | & -a+2b \end{bmatrix}$

$r_2 \leftrightarrow r_3$ $\begin{bmatrix} 1 & 0 & 3 & 5 & | & a-b \\ 0 & 0 & -8 & -35 & | & -a+2b \\ 0 & 3 & 1 & 9 & | & -a+2b \end{bmatrix}$

$-r_2 + r_3$ $\begin{bmatrix} 1 & 0 & 3 & 5 & | & a-b \\ 0 & 0 & -8 & -35 & | & -a+2b \\ 0 & 3 & 9 & 34 & | & -2a+4b+c \end{bmatrix}$

$-1/8 r_2$ $\begin{bmatrix} 1 & 0 & 3 & 5 & | & a-b \\ 0 & 0 & 1 & 35/8 & | & 1/8(-a+2b) \\ 0 & 3 & 9 & 34 & | & -2a+4b+c \end{bmatrix}$

$-3r_2 + r_1$ $\begin{bmatrix} 1 & 0 & 0 & 7/8 & | & 7/8a - 3/8b - 1/8c \\ 0 & 0 & 1 & 35/8 & | & 1/8(-a+2b) \\ 0 & 3 & 9 & 34 & | & -2a+4b+c \end{bmatrix}$

$3r_2 + r_3$ $\begin{bmatrix} 1 & 0 & 0 & 7/8 & | & 7/8a - 3/8b - 1/8c \\ 0 & 0 & 1 & 35/8 & | & 1/8(-a+2b) \\ 0 & 3 & 0 & 5/8 & | & -5/8a + 1/8b + 3/8c \end{bmatrix}$

RREF

So $\begin{bmatrix} 2 \\ 1 \\ 3 \end{bmatrix} = 1 \begin{bmatrix} 2 \\ 1 \\ 3 \end{bmatrix} + 0 \begin{bmatrix} 1 \\ 2 \\ 1 \end{bmatrix} + 0 \begin{bmatrix} 1 \\ 1 \\ 4 \end{bmatrix}$

Not a basis unless dropping 4th vector.

(b) $\left[\begin{array}{ccc|c} 1 & 2 & 3 & a \\ 1 & 2 & 4 & b \\ 2 & 0 & -1 & c \end{array} \right] \xrightarrow[\text{Laz}]{\text{RRREF, Getting}} \left[\begin{array}{ccc|c} 1 & 0 & 0 & -2a+2b+\frac{1}{2}c \\ 0 & 1 & 0 & 3a-\frac{5}{2}b-\frac{1}{4}c \\ 0 & 0 & 1 & -a+b \end{array} \right]$ so $\begin{bmatrix} 2 \\ 1 \\ 3 \end{bmatrix} = \frac{1}{2} \begin{bmatrix} 1 \\ 1 \\ 2 \end{bmatrix} + \frac{11}{4} \begin{bmatrix} 2 \\ 2 \\ 0 \end{bmatrix} - \begin{bmatrix} 3 \\ 4 \\ -1 \end{bmatrix}$
also forms a basis

4.6.11) Find a basis for the subspace W of \mathbb{R}^3 spanned by $\left\{ \begin{bmatrix} 1 \\ 2 \\ 2 \end{bmatrix}, \begin{bmatrix} 3 \\ 2 \\ 1 \end{bmatrix}, \begin{bmatrix} 11 \\ 10 \\ 7 \end{bmatrix}, \begin{bmatrix} 7 \\ 6 \\ 4 \end{bmatrix} \right\}$.
What is the dimension of W ?

Form

$$\left[\begin{array}{cccc|c} 1 & 3 & 11 & 7 & a \\ 2 & 2 & 10 & 2 & b \\ 2 & 1 & 7 & 4 & c \end{array} \right] \xrightarrow{-2r_1, r_2, -2r_1, r_3} \left[\begin{array}{cccc|c} 1 & 3 & 11 & 7 & a \\ 0 & -4 & -12 & -8 & -2a+b \\ 0 & -5 & -15 & -10 & -2a+c \end{array} \right] \xrightarrow{-r_3+r_2} \left[\begin{array}{cccc|c} 1 & 3 & 11 & 7 & a \\ 0 & 1 & 3 & 2 & b-c \\ 0 & -5 & -15 & -10 & -2a+c \end{array} \right]$$

$$\xrightarrow{-3r_2+r_1} \left[\begin{array}{cccc|c} 1 & 0 & 2 & 1 & a-3b+3c \\ 0 & 1 & 3 & 2 & b-c \\ 0 & 0 & 0 & 0 & -2a+5b-4c \end{array} \right]$$

$$\xrightarrow{5r_2+r_3} \left[\begin{array}{cccc|c} 1 & 0 & 2 & 1 & a-3b+3c \\ 0 & 1 & 3 & 2 & b-c \\ 0 & 0 & 0 & 0 & -2a+5b-4c \end{array} \right]$$

So W is spanned by $\begin{bmatrix} 1 \\ 2 \\ 2 \end{bmatrix}$ and $\begin{bmatrix} 3 \\ 2 \\ 1 \end{bmatrix}$ which has dimension 2. It is the plane $-2a+5b-4c=0$.

4.6.12) Find a basis for the subspace W of \mathbb{R}_4 spanned by $\left\{ [1 \ 1 \ 0 \ -1], [0 \ 1 \ 2 \ 1], [1 \ 0 \ 1 \ -1], [1 \ -6 \ -3], [-1 \ -5 \ 1 \ 0] \right\}$.
What is the dimension of W ?

$$\left[\begin{array}{cccc|c} 1 & 0 & 1 & -1 & a \\ 1 & 1 & 0 & -5 & b \\ 0 & 2 & 1 & -6 & c \\ -1 & 1 & -1 & -3 & d \end{array} \right] \xrightarrow{-r_1+r_2, r_1+r_4} \left[\begin{array}{cccc|c} 1 & 0 & 1 & -1 & a \\ 0 & 1 & -1 & -4 & -a+b \\ 0 & 2 & 1 & -6 & c \\ 0 & 1 & 0 & -2 & a+d \end{array} \right] \xrightarrow{-2r_2+r_3, -r_2+r_4} \left[\begin{array}{cccc|c} 1 & 0 & 1 & -1 & a \\ 0 & 1 & -1 & -4 & -a+b \\ 0 & 0 & 3 & -6 & 2a-b+c \\ 0 & 0 & 1 & -2 & 2a-b+d \end{array} \right]$$

$$\xrightarrow{-r_2+r_1, r_4+r_2, -3r_1+r_3} \left[\begin{array}{cccc|c} 1 & 0 & 0 & 3 & -a+b-d \\ 0 & 1 & 0 & -2 & a+d \\ 0 & 0 & 0 & 0 & -4a+b+c-3d \\ 0 & 0 & 1 & -2 & 2a-b+d \end{array} \right] \xrightarrow{r_3 \leftrightarrow r_4} \left[\begin{array}{cccc|c} 1 & 0 & 0 & 3 & -a+b-d \\ 0 & 1 & 0 & -2 & a+d \\ 0 & 0 & 1 & -2 & 2a-b+d \\ 0 & 0 & 0 & 0 & -4a+b+c-3d \end{array} \right]$$

So W is the space $-4a+b+c-3d=0$ which is spanned by $[1 \ 1 \ 0 \ -1], [0 \ 1 \ 2 \ 1], [1 \ 0 \ 1 \ -1]$ of dimension 3.
