Problem 1.1 (Taylor's formula)

Let $f\colon \mathbb{R}^n \to \mathbb{R}$ be smooth, $n \geq 2$. Prove that

$$f(x) = \sum_{|\alpha| \leq k} \frac{1}{|\alpha|!} \mathrm{D}^\alpha f(0) x^\alpha + \mathrm{O}\big(|x|^{k+1}\big)$$

as $x \to 0$ for each $k = 1, 2, \ldots$, assuming that you know this formula for $n = 1$.

Hint: Fix $x \in \mathbb{R}^n$ and consider the function of one variable $g(t) := f(tx)$. Prove that

$$\frac{\mathrm{d}^m}{\mathrm{d}t^m} g(t) = \sum_{|\alpha| = m} \frac{m!}{|\alpha|!} \mathrm{D}^\alpha f(tx) x^\alpha,$$

by induction in m.

Solution. ▸ ◂

Problem 1.2

Write down the characteristic equation for the p.d.e.

$$u_t + \mathbf{b} \cdot \mathrm{D}\, u = f \tag{$*$}$$

in $\mathbb{R}^n \times (0, \infty)$, where $\mathbf{b} \in \mathbb{R}^n$. Using the characteristic equation, solve $(*)$ subject to the initial condition

$$u = g$$

on $\mathbb{R}^n \times \{t = 0\}$. Make sure the answer agrees with formula (5) in §2.1.2 of [E].

Solution. ►

◄

Problem 1.3

Solve using the characteristics:

(a) ${x_1}^2 u_{x_1} + {x_2}^2 u_{x_2} = u^2$, $u = 1$ on the line $x_2 = 2x_1$.

(b) $uu_{x_1} + u_{x_2} = 1$, $u(x_1, x_2) = x_1/2$.

(c) $x_1 u_{x_1} + 2x_2 u_{x_2} + u_{x_3} = 3u$, $u(x_1, x_2, 0) = g(x_1, x_2)$.

Solution. ▶

◀

Problem 1.4

For the equation

$$u = x_1 u_{x_1} + x_2 u_{x_2} + \frac{1}{2}\left(u_{x_1}^2 + u_{x_2}^2\right)$$

find a solution with $u(x_1, 0) = \left(1 - {x_1}^2\right)/2$.
