MA166: Recitation 10

Carlos Salinas

March 30, 2016

#### 1 Homework

Here is this week's WebAssign homework and outlines of the solutions to the problems.

성준아, here is the material you need to know to give this recitation tomorrow. The subject for tomorrow's recitation are the different convergence tests for series found in sections §11.6 to 11.8 of Stewart's book. Here is a rough summary of the material on those sections:

### Stewart §11.6–§11.8 Summary

### §11.6: Absolute Convergence and the Ratio and Root Tests

**Definition 1.** A series  $\sum a_n$  is called *absolutely convergent* if the series of absolute values  $\sum |a_n|$  is convergent.

**Definition 2.** A series  $\sum a_n$  is called *conditionally convergent* if it is convergent but not absolutely convergent.

**Theorem 1.** If a series  $\sum a_n$  is absolutely convergent, then it is conditionally convergent.

**Theorem 2** (The Ratio Test). (i) If  $\lim |a_{n+1}/a_n| = L < 1$ , then the series  $\sum a_n$  is absolutely convergent (and therefore convergent).

- (ii) If  $\lim |a_{n+1}/a_n| = L > 1$  or  $\infty$ , then the series  $\sum a_n$  is divergent.
- (iii) If  $\lim |a_{n+1}/a_n| = L = 1$ , the ratio test is inconclusive; that is, conclusion can be drawn about the convergence or divergence of sum  $a_n$ .

**Theorem 3** (The Root Test). (i) If  $\lim_{n \to \infty} \sqrt[n]{|a_n|} = L < 1$ , the series  $\sum_{n \to \infty} a_n$  is is absolutely convergent (and therefore convergent).

- (ii) If  $\lim \sqrt[n]{|a_n|} = L > 1$  or  $\infty$ , then the series  $\sum a_n$  is divergent.
- (iii) If  $\lim \sqrt[n]{|a_n|} = L = 1$ , the root test is inconclusive.

#### §11.7: Strategy for Testing Series

- **1.** If the series is of the form  $\sum 1/n^p$ , it is a *p*-series, which we know to be convergent if p > 1 and divergent if  $p \le 1$ .
- **2.** If the series has the form  $\sum ar^{n-1}$  or  $\sum ar^n$ , it is a geometric series, which converges if |r| < 1 and diverges if  $|r| \ge 1$ .
- **3.** If the series has a form similar to a *p*-series or geometric series, then one of the comparison tests should be considered.
- **4.** If you can see  $\lim a_n \neq 0$ , then the test for divergence should be used.
- **5.** If the series has the form  $\sum (-1)^{n+1}b_n$  or  $\sum (-1)^n b_n$ , the alternating test is an obvious choice.
- 6. Series that involve factorials and other products are handled conveniently with the ratio test.
- 7. If  $a_n$  has the form  $b_n^n$ , then the root test may be useful.
- 8. If  $a_n = f(n)$ , where  $\int_1^\infty f(x) dx$  is easily evaluated, the integral test is effective.

### §11.8: Power Series

**Definition 3.** A power series is a series of the form

$$\sum_{n=0}^{\infty} c_n x^n = c_0 + c_1 x + c_2 x^2 + \cdots$$

where x is a variable and the  $c_n$ 's are constants called *coefficients* of the series.

**Definition 4.** More generally, a series of the form

$$\sum_{n=0}^{\infty} c_n (x-a)^n = c_0 + c_1 (x-a) + c_2 + (x-a)^2 + \cdots$$

is called a power series in (x - a) or a power series centered at a or a power series series about a.

**Theorem 4.** For a given power series  $\sum c_n(x-a)^n$  there are only three possibilities:

- (i) The series converges only when x = a.
- (ii) The series converges for all x.
- (iii) There is a positive number R such that the series converges if |x-a| < R and diverges if |x-a| > R.

The number R in (iii) is called the *radius of convergence* of the power series. By convention, R = 0 in case (i) and  $\infty$  in case (ii) The *interval of convergence* of a power series is the interval that consists of all values of x fr which the series converges.

|  | Series   | Radius of convergence                | Interval of convergence                     |
|--|--|--------------------------------------|---|
| Geometric series Example 1 Example 2 Example 3 | $\sum_{n!x^{n}} x^{n} $ $\sum_{n!x^{n}} \frac{(x-3)^{n}}{\sum_{n} \frac{(x-3)^{n}}{n}} $ $\sum_{n} \frac{(-1)^{n} x^{2n}}{2^{2n} (n!)^{2}} $ | $R = 1$ $r = 0$ $R = 1$ $R = \infty$ | $(-1,1)$ $\{0\}$ $[2,4)$ $(-\infty,\infty)$ |

Now

### Homework 25

**Problem 1** (WebAssign HW 25, # 1). Determine whether the series is absolutely convergent, conditionally convergent, or divergent.

$$\sum_{n=1}^{\infty} \frac{n}{\sqrt{n^3 - 9}}.$$

**Problem 2** (WebAssign HW 25, # 2). Determine whether the series is absolutely convergent, conditionally convergent, or divergent.

$$\sum_{n=1}^{\infty} \frac{\sin 7n}{5^n}.$$

**Problem 3** (WebAssign HW 25, # 3). Determine whether the series is absolutely convergent, conditionally convergent, or divergent.

$$\sum_{n=1}^{\infty} \frac{12^n}{(n+1)5^{2n+1}}.$$

**Problem 4** (WebAssign HW 25, # 4). Determine whether the series is absolutely convergent, conditionally convergent, or divergent.

$$\sum_{n=2}^{\infty} \frac{(-1)^n}{\ln 6n}.$$

**Problem 5** (WebAssign HW 25, # 5). The terms of a series are defined recursively by the equations

$$a_1 = 4$$
  $a_{n+1} = \frac{7n+1}{3n+9} \cdot a_n$ .

Determine whether  $\sum a_n$  is absolutely convergent, conditionally convergent, or divergent.

# Homework 27

**Problem 6** (WebAssign HW 27, # 1). Determine whether the series is absolutely convergent, conditionally convergent, or divergent.

$$\sum_{n=1}^{\infty} \left( \frac{n^2 + 4}{5n^2 + 2} \right)^n.$$

**Problem 7** (WebAssign HW 27, # 2). Test the series for convergence or divergence.

$$\sum_{n=1}^{\infty} \frac{1}{n+6^n}$$

**Problem 8** (WebAssign HW 27, # 3). Test the series for convergence or divergence.

$$\sum_{n=1}^{\infty} \frac{(4n+1)^n}{n^{5n}}.$$

**Problem 9** (WebAssign HW 27, # 4). Test the series for convergence or divergence.

$$\sum_{n=1}^{\infty} (-1)^n \frac{5n}{n+3}.$$

**Problem 10** (WebAssign HW 27, # 5). Test the series for convergence or divergence.

$$\sum_{n=1}^{\infty} \frac{n^2 8^{n-1}}{(-9)^n}.$$

**Problem 11** (WebAssign HW 27, # 6). Test the series for convergence or divergence.

$$\sum_{n=1}^{\infty} \frac{1}{8n+5}.$$

**Problem 12** (WebAssign HW 27, # 7). Test the series for convergence or divergence.

$$\sum_{n=2}^{\infty} \frac{1}{n\sqrt{\ln 7n}}.$$

**Problem 13** (WebAssign HW 27, # 8). Test the series for convergence or divergence.

$$\sum_{k=1}^{\infty} \frac{6^k k!}{(k+2)!}.$$

**Problem 14** (WebAssign HW 27, # 9). Test the series for convergence or divergence.

$$\sum_{n=1}^{\infty} \frac{6n!}{e^{n^2}}.$$

## Homework 28

**Problem 15** (WebAssign HW 28, # 1). Find the radius of convergence, R, of the series.

$$\sum_{n=2}^{\infty} \frac{x^{n+1}}{2n!}.$$

Find the interval, I, of convergence of the series.

**Problem 16** (WebAssign HW 28, # 2). Find the radius of convergence, R, of the series.

$$\sum_{n=1}^{\infty} \frac{8^n x^n}{n^3}.$$

Find the interval, I, of convergence of the series.

**Problem 17** (WebAssign HW 28, # 3). Find the radius of convergence, R, of the series.

$$\sum_{n=1}^{\infty} \frac{(-5)^n}{n\sqrt{n}} x^n.$$

Find the interval, I, of convergence of the series.

**Problem 18** (WebAssign HW 28, # 4). Find the radius of convergence, R, of the series.

$$\sum_{n=2}^{\infty} (-1)^n \frac{x^n}{12^n \ln n}.$$

Find the interval, I, of convergence of the series.

**Problem 19** (WebAssign HW 28, # 5). Find the radius of convergence, R, of the series.

$$\sum_{n=0}^{\infty} \frac{(x-4)^n}{n^6+1}.$$

Find the interval, I, of convergence of the series.

**Problem 20** (WebAssign HW 28, # 6). Find the radius of convergence, R, of the series.

$$\sum_{n=1}^{\infty} \frac{6^n (x+4)^n}{\sqrt{n}}.$$

Find the interval, I, of convergence of the series.

**Problem 21** (WebAssign HW 28, # 7). Find the radius of convergence, R, of the series.

$$\sum_{n=1}^{\infty} \frac{(x-6)^n}{n^n}.$$

Find the interval, I, of convergence of the series.

**Problem 22** (WebAssign HW 28, # 8). Find the radius of convergence, R, of the series.

$$\sum_{n=1}^{\infty} \frac{n}{b^n} (x-a)^n, \qquad b > 0.$$

Find the interval, I, of convergence of the series.

**Problem 23** (WebAssign HW 28, # 9). Find the radius of convergence, R, of the series.

$$\sum_{n=1}^{\infty} n! (3x-1)^n.$$

Find the interval, I, of convergence of the series.

**Problem 24** (WebAssign HW 28, # 10). Find the radius of convergence, R, of the series.

$$\sum_{n=2}^{\infty} \frac{x^{6n}}{n(\ln n)^8}.$$

Find the interval, I, of convergence of the series.

# 2 Relevant Exam Problems

If you run out of things to talk about within the first few minutes, talk about these problems

**Problem 25** (Exam 3, Spring 2015, # 2). The series

$$\sum_{n=1}^{\infty} \frac{1}{(n^{3\alpha} + 9)^{1/8}}$$

if and only if  $\alpha$  is?

Solution.

**Problem 26** (Exam 3, Spring 2015, #3). Test the following series for convergence or divergence.

(a) 
$$\sum_{n=1}^{\infty} n \sin\left(\frac{1}{n}\right)$$
.

(b) 
$$\sum_{n=1}^{\infty} (-1)^n \arctan(\pi/2n).$$

(c) 
$$\sum_{n=1}^{\infty} \frac{n^2 + 9}{(n^3 + 4)\sqrt{n}}.$$

Solution.

**Problem 27** (Exam 3, Spring 2015, # 7). Suppose that the powers

$$\sum_{n=0}^{\infty} c_n (x-5)^n$$

converges when x = 2 and diverges when x = 10.

From the above information, which of the following statements can we conclude to be true?

- I. The radius of convergence R satisfies  $3 \le R \le 5$ .
- II. We cannot determine the interval of convergence from the above information only.
- III. The derivative of the power series is  $\sum_{n=1}^{\infty} nc_n(x-5)^{n-1}$  which converges when x=3.

Solution.

고마워,성준!
