MA553: Spring 2016 Homework

Carlos Salinas

April 28, 2016

Course Notes

These notes roughly correspond to the three sections (by the same name) on groups, rings and fields from Dummit and Foote's *Abstract Algebra* [?]. I also make nominal use of Herstein's *Topics in Abstract Algebra* [?]

1.1 Group Theory

1.2 Rings

1.3 Field Theory

Homework (Spring 2016)

2.1 Homework 1

Problem 2.1. Let G be a group, $a \in G$ an element of finite order m, and n a positive integer. Prove that

$$|a^n| = \frac{m}{\gcd(m,n)}.$$

Proof. Without loss of generality, we may assume $n < m$; otherwise, by the fundamental theorem of arithmetic, there exist q and r with $r < m$ such that $n = qm + r$ so $a^n = a^{qm+r} = a^{qm}a^r = a^r$. ∎

Problem 2.2. Let G be a group, and let a, b be elements of finite order m, n respectively. Show that if $ba = ab$ and $\langle a \rangle \cap \langle b \rangle = \{e\}$, then $|ab| = \text{lcm}(m,n)$.
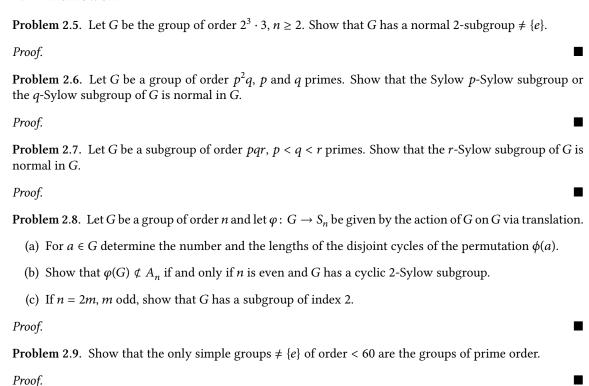

Proof. ∎

Problem 2.3. Let G be a group and H, K normal subgroups with $H \cap K = \{e\}$. Show that

  (a) $hk = kh$ for every $h \in H, k \in K$.

  (b) HK is a subgroup of G with $HK \simeq H \times K$.

Proof. ∎

Problem 2.4. Show that A_4 has no subgroup of order 6 (although $6 \mid 12 = |A_4|$).

Proof. ∎

2.2 Homework 2

Problem 2.5. Let G be the group of order $2^3 \cdot 3$, $n \geq 2$. Show that G has a normal 2-subgroup $\neq \{e\}$.

Proof. ∎

Problem 2.6. Let G be a group of order p^2q, p and q primes. Show that the Sylow p-Sylow subgroup or the q-Sylow subgroup of G is normal in G.

Proof. ∎

Problem 2.7. Let G be a subgroup of order pqr, $p < q < r$ primes. Show that the r-Sylow subgroup of G is normal in G.

Proof. ∎

Problem 2.8. Let G be a group of order n and let $\varphi \colon G \to S_n$ be given by the action of G on G via translation.

   (a) For $a \in G$ determine the number and the lengths of the disjoint cycles of the permutation $\phi(a)$.

   (b) Show that $\varphi(G) \not\subset A_n$ if and only if n is even and G has a cyclic 2-Sylow subgroup.

   (c) If $n = 2m$, m odd, show that G has a subgroup of index 2.

Proof. ∎

Problem 2.9. Show that the only simple groups $\neq \{e\}$ of order < 60 are the groups of prime order.

Proof. ∎

2.3   Homework 3

Problem 2.10. Let G be a finite group, p a prime number, N the intersection of all p-Sylow subgroups of G. Show that N is a normal p-subgroup of G and that every normal p-subgroup of G is contained in N.

Proof.   ∎

Problem 2.11. Let G be a group of order 231 and let H be an 11-Sylow subgroup of G. Show that $H \subset Z(G)$.

Proof.   ∎

Problem 2.12. Let $G = \{e, a_1, a_2, a_3\}$ be a non-cyclic group of order 4 and define $\varphi \colon S_3 \to \operatorname{Aut}(G)$ by $\varphi(\sigma)(e) = e$ and $\varphi(\sigma)(a_1) = a_{\sigma(i)}$. Show that φ is well-defined and an isomorphism of groups.

Proof.   ∎

Problem 2.13. Determine all groups of order 18.

Proof.   ∎

2.4 Homework 4

Problem 2.14. Let p be a prime and let G be a nonAbelian group of order p^3. Show that $G' = Z(G)$.

Proof. ■

Problem 2.15. Let p be an odd prime and let G be a nonAbelian group of order p^3 having an element of order p^2. Show that there exists an element $b \notin \langle a \rangle$ of order p.

Proof. ■

Problem 2.16. Let p be an odd prime. Determine all groups of order p^3.

Proof. ■

Problem 2.17. Show that $(S_n)' = A_n$.

Proof. ■

Problem 2.18. Show that every group of order < 60 is solvable.

Proof. ■

Problem 2.19. Show that every group of order 60 that is simple (or not solvable) is isomorphic to A_5.

Proof. ■

2.5 Homework 5

Problem 2.20. Find all composition series and the composition factors of D_6.

Proof. ∎

Problem 2.21. Let T be the subgroup of $GL(n, \mathbb{R})$ consisting of all upper triangular invertible matrices. Show that T is solvable.

Proof. ∎

Problem 2.22. Let $p \in \mathbb{Z}$ be a prime number. Show:

(a) $(p-1)! \equiv -1 \mod p$.

(b) If $p \equiv 1 \mod 4$ then $x^2 \equiv -1 \mod p$ for some $x \in \mathbb{Z}$.

Proof. ∎

Problem 2.23.   (a) Show that the following are equivalent for an odd prime number $p \in \mathbb{Z}$:

   (i) $p \equiv 1 \mod 4$.
   (ii) $p = a^2 + b^2$ for some a, b in $\mathbb{Z}$.
   (iii) p is not prime in $\mathbb{Z}[i]$.

(b) Determine all prime ideals of $\mathbb{Z}[i]$.

Proof. ∎

2.6 Homework 6

Problem 2.24. Let R be a domain. Show that R is a UFD if and only if every nonzero nonunit in R is a product of irreducible elemnets and the intersection of any two principal ideals is again principal.

Proof. ∎

Problem 2.25. Let R be a PID and p a prime ideal of $R[X]$. Show that p is principal or $p = (a, f)$ for some $a \in R$ and some monic $f \in R[X]$.

Proof. ∎

Problem 2.26. Let k be a field and $n \geq 1$. Show that $Z^n + Y^3 + X^2 \in k(X, Y)[Z]$ is irreducible.

Proof. ∎

Problem 2.27. Let k be a field of characteristic zero and $n \geq 1$, $m \geq 2$. Show that $X_1{}^n + \cdots + X_m{}^n - 1 \in k[X_1, \ldots, X_m]$ is irreducible.

Proof. ∎

Problem 2.28. Show that $X^{3^n} + 2 \in \mathbb{Q}(i)[X]$ is irreducible.

Proof. ∎

2.7 Homework 7

Problem 2.29. Let $k \subset K$ and $k \subset L$ be finite field extensions contained in some field. Show that:

   (a) $[KL : L] \le [K : k]$.

   (b) $[KL : k] \le [K : k][L : k]$.

   (c) $K \cap L = k$ if equality holds in (b).

Proof. ∎

Problem 2.30. Let k be a field of characteristic $\ne 2$ and a, b elements of k so that a, b, ab are not squares in k. Show that $\left[k(\sqrt{a}, \sqrt{b}) : k \right] = 4$.

Proof. ∎

Problem 2.31. Let R be a UFD, but not a field, and write $K := \mathrm{Quot}(R)$. Show that $[\bar{K} : k] = \infty$.

Proof. ∎

Problem 2.32. Let $k \in K$ be an algebraic field extension. Show that every k-homomorphism $\delta : K \to K$ is an isomorphism.

Proof. ∎

Problem 2.33. Let K be the splitting field of $X^6 - 4$ over $\mathbb{Q}$. Determine K and $[K : \mathbb{Q}]$.

Proof. ∎

2.8 Homework 8

Problem 2.34. Let k be a field, $f \in k[X]$ a polynomial of degree $n \geq 1$, and K the splitting field of f over k. Show that $[K : k] \mid n!$.

Proof. ∎

Problem 2.35. Let k be a field and $n \geq 0$. Define a map $\Delta_n : k[X] \to k[X]$ by $\Delta_n(\sum a_i X^i) := \sum a_i \binom{i}{n} X^{i-n}$. Show that

(a) Δ_n is k-linear, and for $f, g \in k[X]$, $\Delta_n(fg) = \sum_{j=0}^n \Delta_j(f)\Delta_{n-j}(g)$.

(b) $f^{(n)} = n!\,\Delta_n(f)$.

(c) $f(x + a) = \sum \Delta_n(f)(a)X^n$.

(d) $a \in k$ is a root of f of multiplicity n if and only if $\Delta_i(f)(a) = 0$ for $0 \leq i \leq n - 1$ and $\Delta_n(f)(a) \neq 0$.

Proof. ∎

Problem 2.36. Let $k \subset K$ be a finite field extension. Show that k is perfect if and only if K is perfect.

Proof. ∎

Problem 2.37. Let K be the splitting field of $X^p - X - 1$ over $k = \mathbb{Z}/p\mathbb{Z}$. Show that $k \subset K$ is normal, separable, of degree p.

Proof. ∎

Problem 2.38. Let k be a field of characteristic $p > 0$, and $k(X, Y)$ the field of rational functions in two variables.

(a) Show that $\left[k(X, Y) : k(X^p, Y^p)\right] = p^2$.

(b) Show that the extension $k(X^p, Y^p) \subset k(X, Y)$ is not simple.

(c) Find infinitely many distinct fields L with $k(X^p, Y^p) \subset L \subset k(X, Y)$.

Proof. ∎

2.9 Homework 9

Problem 2.39. Let $k \subset K$ be a finite extension of fields of characteristic $p > 0$. Show that if $p \nmid [K : k]$, then $k \subset K$ is separable.

Proof. ∎

Problem 2.40. Let $k \subset K$ be an algebraic extension of fields of characteristic $p > 0$, let L be an algebraically closed field containing K, and let $\delta \colon k \to L$ be an embedding. Show that $k \subset K$ is purely inseparable if and only if there exists exactly one embedding $\tau \colon K \to L$ extending δ.

Proof. ∎

Problem 2.41. Let $k \subset K = k(\alpha, \beta)$ be an algebraic extension of fields of characteristic $p > 0$, where α is separable over k and β is purely inseparable over k. Show that $K = k(\alpha + \beta)$.

Proof. ∎

Problem 2.42. Let $f(x) \in \mathbb{F}_q[X]$ be irreducible. Show that $f(X) \mid X^{q^n} - X$ if and only if $\deg f(X) \mid n$.

Proof. ∎

Problem 2.43. Show that $\mathrm{Aut}_{\mathbb{F}_q}(\bar{\mathbb{F}}_q)$ is an infinite Abelian group which is torsionfree (i.e., $\delta^n = \mathrm{id}$ implies $\delta = \mathrm{id}$ or $n = 0$).

Proof. ∎

Problem 2.44. Show that in a finite field, every element can be written as a sum of two perfect squares.

Proof. ∎
